

Nature

Because it is characterized by a moderate continental climate with very mild winters and moderately warm summers, the region of Leskovac abounds in natural scenery which is exceptional in its diversity and beauty.

Numerous mountains, lakes, rivers, spas, canyons, gorges... are a distinction of this region.

Rivers

The largest river in the region of Leskovac is the Južna (South) Morava River, which flows South to North, and together with the Zapadna (West) Morava River forms the Velika (Great) Morava River. Tributaries of the Južna Morava are: the Vlasina river, which collects water from Lake Vlasina and flows through Crna Trava and Vlasotince; the Veternica river, which flows through Leskovac;

The Jablabica river, which springs from the foot of Goljak and flows through Medveđa and Lebane; the Pusta (Deserted) river, which starts on Radan mountain, fills Lake Brestovo and flows through Bojnik. The river Vučjanka, which springs from the Kukavica mountain, flows through Vučje and is a tributary of the Veternica river. The river Vučjanka, which springs from the Kukavica mountain, flows through Vučje and is a tributary of the Veternica river. Also known in the Leskovac region are The Kozaračka, Predejanska, Kopačnica and Sušica rivers.

Flora and Fauna

The natural resources of the Leskovac region are favorable for a great diversity of plant and animal life. The most widespread of animals are: roe deer, wild boar, hare, partridges and pheasants, while the plant world is noted for a very diverse presence of medicinal and other useful plants. The first floristic investigations in this territory were carried out by the founder of Serbian botany Josif Pančić towards the end of the 19th century.

Together with his collaborators he found an exceptionally rare plant at Ostrožub, the endemorelict *Iovorvičnja*, *zelenoće* (*Prunus Laurocerasus*). For over one hundred years this plant occupied the attention of botanists from all over the world, because until then, it was only found in Bulgaria, and 2-3 other localities.

Because of this Ostrožub was declared a strict natural reservation. The Leskovac region possesses more than 50 other rare (mostly medicinal) plants, oedemas etc.

The Grdelićka Gorge

About ten kilometers south of Leskovac, the spacious Leskovian Valley begins to transform into hilly forested terrain. This is where the picturesque Grdelićka Gorge arises, the narrowest part of which is called Momina Gorge. The Južna Morava river flows through the gorge.

Further up the gorge, at 25 km from Leskovac is Predejane, a beautiful mountain picnic ground surrounded by woods, hills, sheltered from wind, and without fog - ideal for rest.

The Hillsides of the Babička mountain Range

This untouched mountain beauty is rich with various game, and what sets it apart is that from its slopes extend exceptional views of the Suva Mountain, so that it can serve as a starting point for organizing tours of mountain hiking.

The Canyon of the Vučjanka River

By flowing through narrow cuts, boulders and cliffs of the Kukavica Mountain, the Vučjanka river forms wonderful canals, waterfalls, and "vessels".

In the canyon several kilometers long there are plenty attractive places for bathing. At the very center of the canyon is one of the oldest hydroelectric power plants in the Balkans.

Built in 1903, it is still operational today.

The Kukavica Mountain

The Vlasinsko Lake

A unique advantage of this mountain lies in the fact that it is only 16 km away from Leskovac. It is linked with suburban bus routes, with very frequent departures, and on a road with modern paving. Kukavica Mountain, with it's highest peak Vljajna at 1,441 m above sea level, stretches between the Vranje Valley to the south, the Leskovačka Valley to the north, the Grdelićka Valley to the east, and the Veternica Valley to the east.

Constrained as it is, it spreads over 587 sq m. The Kukavica Mountain has natural conditions for the development of mountain tourism, and hunting and fishing, having in mind the wealth of game, of which the most important are wild boar and roe deer.

Other species of game and birds, as well as the presence of predators, dominate these expanses. These are managed by the public company "Srbija Å ume" by way of the established hunting ground "Kukavica", located at an altitude of 1,360 m above sea level.

Below the peak there is a sky lane 600 m long and 100 m wide, at an average inclination of 22 %. Kukavica is an ideal place for the preparation of sportsmen/women, climbing and hiking in natural surrounding, country tourism, and the gathering of medicinal herbs.

The Pasha's drinking fountain

To Leskovians, the Pasha's drinking fountain represents the most visited and most promising picnic ground. It is located 10 km from Leskovac.

The position, ground configuration and richness in conifer and oak woods over an area of 86 hectares makes the grounds attractive for sports, recreation, hunting and fishing.
