

eGovernment

By instigating the presentation of the City of Leskovac, certain public services are also being set in motion, engaged in unifying municipal administrations and public utility companies into an integrated system of municipal eGovernment, or so called communication services - answering to citizens in electronic form.

These include a guide through the municipal administration, questions and answers, providing services, receiving requests and providing solutions to problems of municipal or other nature - all on the Internet.

Services set up in the official presentation of the Municipality are as follow:

- Administration Guide - a guide through the administration of the municipal government
- Forms - download forms in Word or PDF format
- Virtual Registrar - order excerpts and certificates
- Voter Registration List - check if you are listed
- System 48 - report a utility problem
- Citizen's Questions
- Ask the Mayor

For resolving issues of citizens it now suffices to gain access to the Internet, and to this Portal.

Services are designed to provide citizens with 24 hour access, and to raise the position of municipal administration to a higher level.

By introducing eGovernment, with the aim of more efficient work and better communication with citizens, and the integration and oversight of all municipal administrations and public utility companies, the Municipality of Leskovac will provide an efficient response to the issues of citizens.
